# India Delivery Service Analysis

Yanzhen Chen
Northeastern University

This dashboard provides users with an intuitive and interactive interface, allowing them to explore the dataset more conveniently and extract valuable insights. Users can utilize flexible filtering options to select different delivery agents and order types, enabling quick access to relevant statistics and visualizations. The map view visually displays delivery service ratings across various cities, allowing users to quickly identify service quality differences through color coding and order volume markers. Additionally, the order volume distribution chart helps users understand the share of orders across major cities, while the detailed statistics section provides key metrics such as ratings, delivery time, and customer service scores for in-depth analysis of trends and patterns. This dashboard not only enhances data analysis efficiency but also empowers users to make more informed decisions based on visualized insights. The dataset is sourced from Kaggle(https://www.kaggle.com/datasets/vivekattri/indias-fast-delivery-agents-reviews-and-ratings/data).
